

SOLAR SSR

The standing seam metal roof that harvests energy from the sun.

In this age of rising energy costs and the demand for sustainable design, Fabral is pleased to offer a green solution for your metal roofing needs.

NEW FEATURE- calculate your Return-On-Investment online. to get started.

ROI of 10 Years or Less

20-Year Warranty

Fabral's Solar SSR system was designed with the highest quality, UL approved components. The flexibility and durability of these laminates make them ideal for metal roofs, where expansion, contraction and curving are considerations. Unlike polycrystalline photocells that are heavy and fragile, no roof penetrations and no additional structural support are required. And the panel/laminate bond that's created has been tested and proven to withstand wind of 160 mph.

When it comes to generating electricity, compared to any other technology, Fabral's Solar SSR laminates achieve higher relative efficiency under high temperatures and low light.

The Solar SSR can be applied to these Fabral metal roofing panels—**1 1/2" SSR**, **Thin Seam**, **Slim Seam** and **Snap-on-Seam**.

Electric Is Included

When you specify Fabral's Solar SSR panel you get the complete system. This includes all schematics and specifications for wiring and electrical components for an electrical subcontractor to implement. Upon commissioning of the system, your Solar SSR system will begin generating clean, renewable electric power that's sent directly into the power grid through the building's electric meter.

A System Size for Any Budget or Requirement

No matter what your budget or your building's requirement, Fabral has a solar standing seam roof system for you, including 5, 7, 15, 30, 60, 125, and 250 kw systems.
